

Make a difference! Join the MSc programme in Sustainable Tropical Forestry

Forests are essential in the global fight to reduce poverty, develop countries and communities, and mitigate climate change. And they harbour a true diversity of species. Do you want to work with such issues? Do you want to test theory in the field? Then the Erasmus Mundus programme Sustainable Tropical Forestry (SUTROFOR) is what you are looking for! This two year European master programme will enable you to handle the huge challenges that exist today in relation to use and conservation of the world's forests in developing countries.

SUTROFOR is a joint programme developed and implemented by five European universities in Denmark, France, Germany, Italy, and Wales. The programme provides SUTROFOR students with direct access to the best forestry teaching in Europe. And you can access the global research networks of the teaching staff when you decide on your thesis topic.

During the programme students will spend one year at each of two of the partner universities (University of Copenhagen in Denmark, AgroParisTech in Southern France, Dresden University of Technology in Germany, University of Padova in Northern Italy and Bangor University in Wales). Besides the many smaller field trips which are part of the individual modules there is a joint summer course where all SUTROFOR students carry out field work in a developing country - getting to use in the field the knowledge and tools that have been acquired throughout the programme's first year. In the second year it is possible to specialise within areas such as ecology, management, agroforestry, forest-people relations or ethics and trade.

For more information contact the SUTROFOR Secretariat (sutrofor@life.ku.dk). Read about the programme and partner universities, find application forms, etc., at www.sutrofor.eu. The **application deadline is 15 January 2012**. Study start in autumn 2012.
