

## ERIH Initial List: Anthropology (Evolutionary) 2007

European Reference Index for the Humanities (ERIH) is a project jointly sponsored by ESF and the European Commission ERA-Net project "Humanities in the European Research Area" (HERA) (Contract no.: ERAC-CT-2005-0161179). It comes under work-package 7 (Research Infrastructures).

The ERIH lists will help identify excellence in Humanities scholarship and should prove useful for the aggregate benchmarking of national research systems, for example, in determining the international standing of the research activity carried out in a given field in a particular country.

As they stand, the lists are not a bibliometric tool. The ERIH Steering Committee and the Expert Panels therefore advise against using the lists as the only basis for assessment of individual candidates for positions or promotions or of applicants for research grants.

**Expert Panel Scope Note:** Social anthropology is the social scientific study of societies in the present and the past. As such, it includes disciplines labelled differently as "cultural anthropology", "ethnology", or "Völkerkunde", as well as the disciplines engaged in the social scientific study of regional or local traditions, such as ethnography, Volkskunde and folklore studies.

Journals devoted to Oriental and African Studies and other regionally defined fields are included, when they regularly publish contributions in social anthropology.

Social science journals which regularly publish a high number of "anthropology" articles have been included, while journals that are merely used by anthropologists for access to data gathered in other disciplines are not included. Evolutionary anthropology is more closely related to life science research (physical anthropology). Top-journals from this field of anthropology (incl. notably: paleo-anthropology) are included, where they publish material relevant to interdisciplinary Humanities studies. Evolutionary anthropology journals appear on a separate list.
